Dear Steel Center Family:

Welcome to the Automotive Technology program at Steel Center. We are professionals in the automotive field with over 45 years of combined experience both in education and industry.

This program instructs students on the repair and maintenance of today's cars and light trucks. The students receive both classroom and applied instruction. The students will utilize repair manuals, textbooks and computerized equipment to diagnose, troubleshoot and repair malfunctions within a vehicle's many operating systems. Obtainment of a PA Safety Inspection and Emissions certification is emphasized in the senior year. Lift it Right and EPA 609 Refrigeration Recovery and Recycling certifications are available to all grade levels.

Students are required to be in uniform daily and promote a business-like atmosphere. The student must have a plain black or dark blue work shirt, work pants and steel or composite leather type work boots or shoes. Additional information on purchasing these items will be provided the first week of school.

I look forward to meeting you and working together to develop your technical and academic skills. Please feel free to contact us at the number or emails listed above if you have questions about this program.

Sincerely,

Mr. Joseph Pace  
Mr. Michael Guckes  
Automotive Technology Instructors
